

SCAPE PICK-PILOT

Stop Guessing, Start Picking — The AI Copilot for Robotic Bin-Picking

 OPEN LIVE APP

SCAPE-PICK-PILOT.WEB.APP

CAMPAIGN PASSCODE

AUTOMATIK26

Try it right now on your smartphone or laptop:

👉 <https://scape-pick-pilot.web.app/?event=Automatik26> (or scan the QR code on our booth screen)

🎨 How It Works (In 60 Seconds)

1. The Bottleneck
Slow emails, missing
dimensions, guesswork.

2. Voice & CAD Capture
Dictate on the shop
floor or drop 3D CAD.

3. Instant Feasibility
Automated camera &
gripper recommendation

Why Automation Engineers & Integrators Love SCAPE PICK-PILOT

Evaluating robotic bin-picking cells used to take days of back-and-forth emails, lost CAD drawings, and missing cycle time definitions. **SCAPE PICK-PILOT replaces the guesswork with AI-driven engineering precision.**

1. Speak Naturally (Live Microphone Dictation)

- Tap the microphone and describe your application in **Danish, English, German**, or your preferred language:

"We need to pick forged steel connecting rods weighing around 1.2 kg from a standard 1200x800x600 mm pallet. Our target production is 450 parts per hour using a Fanuc CRX robot."

- PICK-PILOT converts your speech, performs the math, and structures the data instantly.

2. Automated Engineering Calculations

- **Part Weight Estimation:** Give the dimensions and material (e.g. *Stainless Steel, Aluminum, Cast Iron*), and the AI calculates the volume, density, and estimated part weight in kilograms.
- **Cycle Time Physics:** Tell it your production target (e.g. *450 parts/hour* or *3,000 parts/shift*), and the assistant calculates your exact takt time in seconds per part.

3. Drag-and-Drop 3D CAD & Smartphone Photos

- Drop **.stl** 3D CAD files directly into your project.
- Snap photos of your parts, pallet boxes, and cell layout directly with your smartphone camera.
- Smart compression ensures rapid upload even on mobile 4G/5G connections.

4. Instant "Project Information Advice"

- With one tap, Gemini AI audits your specifications against real-world bin-picking physics:
 - Detects surface reflectivity, glare, and optical challenges.
 - Identifies part entanglement or nesting risks.
 - Verifies gripper suction cups and magnetic payload limits.

5. One-Click Feasibility & PDF Report

- Download a professional, branded **PDF Feasibility Report** to share with management, system integrators, and project stakeholders.

3-Minute Live Demo at the Booth

Step	Action	What Happens
1	Open scape-pick-pilot.web.app	Instant launch in any browser — no app store download required.
2	Tap + Start with AI	Opens a structured engineering project workspace.
3	Tap the  Microphone	Dictate your part dimensions, bin size, and robot brand.
4	Click Apply Changes	Watch your form populate with verified engineering parameters.
5	Click  AI Advice	Get an instant feasibility breakdown and recommended vision hardware.

About SCAPE Solutions

Scape Technologies is the world leader in reliable robotic bin-picking with over 20 years of industrial experience across automotive, metalworking, and manufacturing plants worldwide.
